# Ruby on Rails 5.x

Do início ao fim!

- Conhecendo o form\_with
  - o https://api.rubyonrails.org/v5.1/classes/ActionView/He lpers/FormHelper.html#method-i-form with

Adicione o :update na rota config/routes.rb:

```
namespace :admins_backoffice do
get 'welcome/index' # Dashboard
resources :admins, only: [:index, :edit, :update]
end
```

 Altere o formulário de edição app/views/admins\_backoffice/admins/edit.html.erb para:

```
<div class="form-group">
         <%= form.label :password %>
         <%= form.password field :password, class:"form-control",</pre>
   placeholder:"Senha" %>
      </div>
0
      <div class="form-group">
          <%= form.label :password confirmation %>
          <%= form.password field :password confirmation,</pre>
   class: "form-control", placeholder: "Confirmação da senha" %>
       </div>
      <button type="submit" class="btn btn-default">Salvar
   <% end %>
```

Altere o i18n em /config/locales/models.pt-BR.yml

```
attributes:
admin:
id: Código
email: Email
password: Senha
password_confirmation: Confirmação da Senha
```

Adicione o método update no

app/controllers/admins\_backoffice/admins\_controller.rb

```
def update
   admin = Admin.find(params[:id])
   params admin = params.require(:admin).permit(:email, :password,
:password confirmation)
    if admin.update(params admin)
     redirect to admins backoffice admins path, notice:
"Administrador atualizado com sucesso!"
   else
     render :edit
   end
 end
```
